

Starting from SP 5.05 the SM20 filter has been included into the delivery package. It allows to select which log records should be collected or specify logs to be excluded.

The screenshot shows the 'Administrator' menu in the PowerConnect interface. The 'Metric filters' option is selected, opening a sub-menu. In this sub-menu, the 'SM20 Audit Log filter' is highlighted with a red box. Other filters listed include ECATT Configuration, IDOC Segment filter, Change doc. filter, Table reader filter, NRIV filter, SQVI report filter, Logs file filter, SM37 job filter, SQST filter, AL11 filter, SLG1 filter, SRT_MONI filter, STAD metrics, and SQL Scripts metrics. A 'More' option is also present, which opens another sub-menu containing 'SXMB filter', 'Process Chain filter', and 'SM20 Audit Log filter' (highlighted with a red box).

SM20 Audit Log filter maintenance			
Message Text	INCL/EXCL	Option	Active
*	I	CP	<input checked="" type="checkbox"/>
	✓		<input type="checkbox"/>
	✓		<input type="checkbox"/>

Characters ‘*’ (any value) and ‘+’ (any character) can be used to define a template. ‘I’ and ‘E’ can be used to include or exclude logs records. Option field can contain the same values as standard select-option or range.

‘Save’ should be pressed as the last step to save and apply the filter.

Important notes!

Please note, that filter should contain at least one ‘I’ (include) record to extract the data. It is done to be able to extract only specific log records just by adding single filter row. In order to exclude the data, the record shown above is mandatory.
