

KB0734- Setting up the table reader

The standard table reader can be used to read from a table with specific criteria and specific fields sent to Splunk.

Open the **Administrator** -> **Metric Filter** -> **SM37 job filter**

Add in a jobname (wildcards are supported, '*' means all jobs) and check either

- IsFinished - All finished jobs that match the JobName filter have their logs sent to Splunk
- IsCanceled - All cancelled jobs that match the Jobname filter have their logs sent to Splunk

Table View Edit Goto Selection Utilities(M) System Help
