## 1. Transports

Please import following transports as a prerequisite (in listed order):

- 1) N71K902078 SP 6.01 BSP log runtime field (for PowerConner <= SP 6.00);
- 2) CR1K900023 SP 6.01 BSP log HTTP handler
- 3) CR1K900025 PowerConnect BSP handler SICF setup

Once the transport is imported, please ensure BSP node (/default\_host/sap/bc/) in SICF contains custom handler:

The screenshot shows the SAP SICF configuration for the service 'bsp' at the path '/default\_host/sap/bc/'. The service is active and configured for English. The description is 'BUSINESS SERVER PAGES (BSP) RUNTIME'. The 'Handler List' tab is selected, showing the following handlers in order of execution:

N...	Handler
1	/BNWVS/CL_HTTP_EXT_BSP_LOG
2	CL_HTTP_EXT_BSP
3	

## 2. Activate the extractor

Please activate the extractor in the Administrator->Setup Group Def menu option as it is shown on the screen below:

The screenshot shows the 'Administrator Setup Group Def' menu option. The 'BSP\_LOG' entry is highlighted, and the 'ooo' (on) checkbox is checked, indicating that the extractor is activated.

Please redefine the extract interval if needed (1 hour by default).

## 3. Activate the BSP HTTP handler

Go to SM30->/BNWVS/CFG and add following parameter as it is shown below:

The screenshot shows the SM30 parameter configuration for the BSP HTTP handler. The parameter 'BSP\_LOG\_ACTIVE' is highlighted, and the value 'X' is entered, indicating that the handler is activated.

Once the parameter value is saved, the buffer table will be populated with BSP log data collected by HTTP handler.

**Important note!** In case of any issue, please switch the parameter off and contact BNW support.
