

KB 092 – SAP SUM (Software Update Manager) downtime minimized option with PowerConnect installed

Date: 19 Feb 2020

Symptom:

While upgrading ABAP based systems via *downtime minimised* approach with SUM tool, we have observed a bug which leads to Inactive import of ABAP programs.

Solution / Workaround:

This issue has been found in NetWeaver 7.54 based systems. It might happen in other versions.

So, to be on safer side, we recommend customers NOT to use the downtime minimised mode until further communication.
