

Splunk-ify your SAP solutions

PowerConnect for SAP and Splunk

Splunk-ify your SAP solutions

Access significant savings potential with SoftwareOne's PowerConnect for the entire suites of SAP products – SAP NetWeaver, S/4HANA Cloud and SAP SaaS products

Business-critical IT operations data generated by SAP systems is one of the most underutilised and valuable data generated across an organisation. Using PowerConnect to access SAP information in real-time and leveraging Splunk machine learning, artificial intelligence, advanced big data, and visualisation capabilities unlocks unprecedented insight, understanding, and preventive actions.

This newly gained ability to proactively manage the health of your SAP landscape changes the game for the CIO and the IT Operations team, while significantly improving your mission-critical system uptime and minimising security exposure. No longer will your organisation reactively manage un-planned downtime, business, and security events, but rather predict and prevent issues before they materialise and have a chance to damage your business.

With 13 SAP certifications till date, PowerConnect offers out-of-the-box monitoring capability for SAP landscapes leveraging Splunk's big-data analysis and visualisation capabilities. The monitoring capability allows clients to obtain real-time insights into SAP's health, performance and security status with aim to minimise unplanned downtime and risk events.

Are you looking for the best way to monitor your SAP landscape? Trust SoftwareOne and Splunk's strategic partnership and start using PowerConnect for SAP & Splunk – our solutions for an advanced SAP landscape monitoring with SAP & Splunk - certified integration with SAP S/4HANA, SAP NetWeaver or SAP SaaS products for sending ANY SAP dataset and transaction type (structured or unstructured) to Splunk!

SAP S/4HANA Journey

- **65% reduction** in unplanned downtime events
 - **75% reduction** in MTTR for mission-critical apps and services
 - Predict imminent outages **30-40 minutes** in advance
 - **90%** reduction in incident investigation time
 - Reduce annual P1/P2 tickets by over **30%** and spend less time in war rooms
-

Speed up investigations and simplify the creation of useful alerts for critical SAP events through:

Pre-defined & customisable dashboards

- 200+ of Splunk dashboards and SPL queries
- Advanced time- machine dashboard allowing for before & after performance comparisons
- Pre-configured App for Splunk Enterprise, Splunk Cloud, Splunk ITSI and Splunk Enterprise Security (ES)

Actionable insights

- Real-time data informing SAP operational teams on security, performance, and business metrics
- Detection of anomalous user and/ or system usage
- Advanced data correlation to identify root cause of failures
- Visualise SAP KPIs before/during/after SAP migration phase

An integrated solution

- Extracting a rich set of SAP field values/data sets
- PowerConnect framework allows you to flexibly collect data from custom development tables and other system enhancements
- Security data from PowerConnect is CIM compliant for easy integration with Splunk ES and ITSI

Open technology

- Supports and certified for SAP ABAP, SAP NetWeaver JAVA, non-NetWeaver JAVA, and S/4HANA,
- Supports and certified for Splunk Cloud and Splunk Enterprise

Are you ready to get started?

We help you to fully unlock the power of Splunk!

Contact our SAP expert team for a deep-dive into our service offerings!

Splunk helped us achieve transparency into our SAP Landscape that was not previously available using standard tools. The ability to customize dashboard metrics in real time has proved invaluable as technical teams are now able to monitor key performance metrics and catch potential problems before the business is impacted.

The technical monitoring capabilities of Splunk with PowerConnect, in our opinion, are far more robust than standard SAP Solution Manager TechMon. We are able to develop and deliver alerts in real-time and customize on the fly based on our exact needs. What's more - when an exact alert isn't available, the team always goes above and beyond to develop a custom alert and deliver it in future releases.

Fortune 500 Retail Customer

Satisfying security & compliance requirements is critical to our organisation. PowerConnect helps us achieve this goal.

For example, our security & compliance teams receive automated alerts from PowerConnect if the same user ID is used across geographically dispersed locations within a defined timeframe. If the same user ID logs on to our SAP business systems in London and New York within say 2 hours, we need to investigate.
